The Evolution of the Work Landscape

boss

Mews

From Boss Design

We used to rely on architectural intervention to divide spaces and define privacy, the new workplace landscape has shifted to habitable spaces with high levels of function and flexibility. But we need more. Spaces that not only work well but make us feel good too.

Positive Spaces⁺

Using the Negative

Discover your natural habitat in the new work landscape

It's clear that remote and hybrid working is here to stay, even after the pandemic recedes. Whilst some workers will gradually find their way back to in-person workplace settings, this is just the beginning of working from anywhere for many others. Research by LifeSize states that video meetings improve productivity by 50%, and 90% of people find it easier

to get their point across (76% of us using video conferencing for remote work). These permanently hybrid and remote teams need the space and tools to communicate and collaborate just as effectively and perhaps more frequently than before. The Mews landscape habitats are designed to fulfil the needs of the modern workplace.

Mews enhances the ergonomics of your space through air quality, temperature and lighting to create habitats that improve the quality of work, connection, and collaboration.

Mews

Focus

A quiet space designed for visual and acoustic privacy. Lighting modes created for video conferencing and prolonged pieces of work with ventilation that maintains comfortable temperature and quality of air.

Lighting Design

Video Conferencing

Lighting

We have all become very aware of how we look on camera, from the first moment we log in to our video call to the moment we catch a glimpse of our faces on the attendee screen. Having that human connection is vital to gauge response and better understand the conversation. Creating a flattering environment to be seen is paramount, boosting confidence and projecting the right message for your brand. There are several elements to control to create a complimentary visual for video conferencing: lighting, colour, shape, and texture.

The VC lighting system creates loop lighting, where a small shadow of the subjects noses on their cheeks and avoids dark shadows around the eyes. The light source is slightly higher than eye level and about 30-45 degrees from the camera and bounces light off the back wall to distribute a defused, soft light evenly across the face. The rear downlight against the back wall provides a halo effect, a flattering contrast around the head.

Whilst your Focus pod can be upholstered in any colour, on the desk wall, we recommend using natural tones that reflect a flattering colour across the face and the introduction of subtle texture can introduce interest and create visual privacy too.

Mews

Connect

A meeting space designed for visual and acoustic privacy. Controllable lighting creates a softer space to focus and share ideas, and ventilation maintains a comfortable temperature and quality of air over longer periods.

Ergonomics

Comfort & Performance

Air Quality & Temperature

Our new ventilation system allows fresh air to be drawn in - hot air extracted out. All pods are also set to deliver 12 air changes per hour as a 'nominal' setting. Providing quality air flow and a stimulating atmosphere whilst maintaining the ambient temperature.

Acoustics

Mews offers high levels of acoustic insulation, achieved through innovative sound absorbent wall panels - disconnecting you from the wider environment to focus, and providing acoustic privacy for calls.

Connectivity

Power to recharge USB A+C with HDMI connectivity to a screen (recommended size 32").

Tables

Standard tables have an anti microbial Fenix top and rounded corners to maximise on space.

Mews

Connect Open

An informal meeting space designed for keeping in touch with your space and people around you. The slatted ceiling creates an open, well lit space with different levels of attachment.

Mews

Collaborate

Mews

Collaborate

The space around the pods, delineated by curtains on the Mews grid system, creates spaces perfect for collaboration and informal lounge settings.

9 Reasons Why Mews?

- Increased need for private video conferencing and focus space.
- Effective use of social spaces around the pods.
- Comfortable proportions for users and compact footprint.
- Simple to specify and plan.
- Easy to 'hack' and make stylish and unique configurations.
- Diverse modules to build landscapes perfect for the users needs.
- Specification easily updated and modified
- Acoustic & visual privacy
- Environmentally sound construction
